

Module 2: Activity 1

ENVIRONMENTAL HEALTH

Purpose

To help make connections between the social-ecological model and the Statewide Health Assessment (SHA). The social-ecological model has 5 levels: individual, interpersonal, institutional, community, and policy. The purpose of the assignment is for you to connect the information provided in the readings and lectures on environmental health and the levels into the social-ecological model.

Task

1. Read and listen to all assigned readings and lectures given about the SHA
2. Review the social-ecological model
3. Using the social-ecological model, search for environmental health examples in the SHA and lecture which demonstrate environmental impacts on a person's health. Please look for one example that is individual focused, one example interpersonal, one example institutional, one example which is community focused, and one example systems focused.

Criteria

For each example based on the people section of the SHA provide 1-3 sentences description of how you see if it is impacting individual/interpersonal/institutional/community/or policy.
